Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2014.

SECTION 1 – CONFLICT MINERALS DISCLOSURE

Item 1.01 Conflict Minerals Disclosure and Report

Introduction

This Specialized Disclosure Form (“Form SD”) of Allot Communications Ltd. (the “Company,” “we,” or “us”) is filed pursuant to Rule 13p-1 (the “Rule”) promulgated under the Securities Exchange Act of 1934, as amended (the “Exchange Act”), for the reporting period from January 1, 2014 to December 31, 2014.

The Rule requires disclosure of certain information when a company manufactures or contracts to manufacture products for which the minerals specified in the Rule are necessary to the functionality or production of those products. The specified minerals are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, which are limited to tantalum, tin and tungsten (collectively, the “Conflict Minerals”), that originated in the Democratic Republic of the Congo (“DRC”) and certain adjoining countries (collectively with the DRC, the “Covered Countries”).

Conclusion Based on Reasonable Country of Origin Inquiry

In accordance with the Rule, the Company has concluded in good faith that during the year ended December 31, 2014:

- Certain of the Company’s operations manufactured, or contracted to manufacture, products (the “Covered Products”) for which the Conflict Minerals are necessary to the functionality or production of those products.
- Based on the Company’s good faith reasonable country of origin inquiry regarding the Conflict Minerals, the Company had reason to believe that (i) the Conflict Minerals contained in its Covered Products may have originated in the Covered Countries and (ii) such Conflict Minerals may not be from recycled or scrap sources.

On the basis of these conclusions, the Company proceeded to exercise due diligence with respect to the source and chain of custody of the Conflict Minerals contained in its Covered Products.

Countries of origin identified as a result of the Company’s reasonable country of origin inquiry include, to the extent known, Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Canada, Chile, China, Czech Republic, Estonia, France, Germany, Hong Kong, India, Indonesia, Italy, Japan, Kazakhstan, Kyrgyzstan, Malaysia, Mexico, Netherlands, Peru, Philippines, Poland, Russian Federation, Saudi Arabia, South Africa, South Korea, Sweden, Switzerland, Spain, Taiwan, Thailand, Turkey, United Kingdom, United States of America, Uzbekistan and Vietnam.

Conflict Minerals Disclosure

A copy of the Company’s Conflict Minerals Report is filed as Exhibit 1.01 to this Form SD, and is publicly available on the Company’s website at <http://investors.allot.com/sec.cfm>. The Conflict Minerals Report describes the Company’s diligence efforts. Unless otherwise stated in this Form SD and the Conflict Minerals Report filed as Exhibit 1.01 hereto, any documents, third-party materials or references to websites (including the Company’s) are not incorporated by reference in, or considered to be a part of, this Form SD and the accompanying Conflict Minerals Report.

Forward-Looking Statements

In addition to historical facts, this Form SD and the attached Conflict Minerals Report may contain forward-looking statements within the meaning of Section 27A of the U.S. Securities Act of 1933, as amended, Section 21E of the U.S. Securities Exchange Act of 1934, as amended, and the safe harbor provisions of the U.S. Private Securities Litigation Reform Act of 1995. We have based these forward-looking statements on our current expectations and projections about future events. Forward-looking statements include information concerning our possible or assumed future results of operations, business strategies, financing plans, competitive position, industry environment, potential growth opportunities, potential market opportunities and the effects of competition. Forward-looking statements include all statements that are not historical facts and can be identified by terms such as “anticipates,” “believes,” “could,” “seeks,” “estimates,” “expects,” “intends,” “may,” “plans,” “potential,” “predicts,” “projects,” “should,” “will,” “would” or similar expressions that convey uncertainty of future events or outcomes and the negatives of those terms. All forward-looking statements in this Form SD and the attached Conflict Minerals Report reflect our current views about future events, are based on assumptions and are subject to risks and uncertainties that could cause our actual results to differ materially from future results expressed or implied by the forward-looking statements. Many of these factors are beyond our ability to control or predict. Important factors that could cause actual outcomes to differ materially from those contained in any forward-looking statement include those described in the Company’s reports, including its annual report on Form 20-F for the fiscal year ended December 31, 2014, and other forms filed by the Company with or furnished by the Company to the Securities and Exchange Commission. You should not put undue reliance on any forward-looking statements. Unless we are required to do so under U.S. federal securities laws or other applicable laws, we do not intend to update or revise any forward-looking statements.

Item 1.02 Exhibit

As specified in Section 2, Item 2.01 of this Form SD, the Company is hereby filing its Conflict Minerals Report as Exhibit 1.01 to this Form SD.

SECTION 2 – EXHIBITS

The following exhibit is filed as part of this report.

Exhibit No.	Description
1.01	Conflict Minerals Report of Allot Communications Ltd.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

EXHIBIT INDEX

Exhibit No. Description

1.01 Conflict Minerals Report of Allot Communications Ltd.

Allot Communications Ltd.**Conflict Minerals Report
For the reporting period from January 1, 2014 to December 31, 2014****INTRODUCTION**

This Conflict Minerals Report (the “Report”) of Allot Communications Ltd. (“Allot,” “Company,” “we” or “us”) has been prepared pursuant to Rule 13p-1 and Form SD (collectively, the “Rule”) promulgated under the Securities Exchange Act of 1934, as amended, for the reporting period between January 1, 2014 and December 31, 2014 (the “2014 calendar year”). The Rule requires disclosure of certain information when a company manufactures or contracts to manufacture products and the minerals specified in the Rule are necessary to the functionality or production of those products. The specified minerals are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, which are limited to tantalum, tin and tungsten (collectively, the “Conflict Minerals”), that originated in the Democratic Republic of the Congo (“DRC”) and certain adjoining countries (collectively with the DRC, the “Covered Countries”).

In accordance with the Rule, the Company has concluded in good faith that during the year ended December 31, 2014:

- Allot has manufactured or contracted to manufacture products as to which Conflict Minerals are necessary to the functionality or production of its products; and
- Based on its reasonable country of origin inquiry, Allot had reason to believe that a portion of its necessary Conflict Minerals originated or may have originated from the Covered Countries and that those minerals may not be solely from recycled or scrap sources

As a result of the above findings, Allot is filing this Report with its Form SD to comply with the requirements of the Rule.

PART I. DESCRIPTION OF THE COMPANY’S PRODUCTS COVERED BY THIS REPORT

Allot is a leading global provider of intelligent broadband solutions, focused on developing mobile, fixed and enterprise networks to support the “digital lifestyle.” Allot’s solutions, which are based on deep packet inspection technology, identify and leverage the business intelligence in data networks, empowering network operators to shape users’ digital lifestyle experiences and to capitalize on the network traffic they generate. As described in this Report, during the reporting period between January 1, 2014 and December 31, 2014, certain of the Company’s operations manufactured, or contracted to manufacture, products for which the Conflict Minerals are necessary to the functionality or production of those products (collectively, the “Covered Products”).

During the 2014 calendar year, the Covered Products included the following:

- Allot Service Gateway, Sigma E, Allot Service Gateway Tera and VDC Product Families
 - o Highly scalable mobile platforms that enable Internet providers to manage high-speed broadband performance and to control infrastructure and operating costs; and
 - NetEnforcer Device Family
 - o Purpose-built devices for monitoring and managing data traffic on enterprise, cloud and broadband service provider networks that provide essential visibility, policy enforcement and traffic steering for a wide range of networks.
-

PART II. THE COMPANY'S DUE DILIGENCE PROCESS

The Company's due diligence measures have been designed to conform to the five-step framework laid out by the Organization for Economic Co-operation and Development in its OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Second Edition (2013), including the related supplements on gold, tin, tantalum and tungsten (collectively, the "OECD Guidance").

OECD Guidance Step 1: Establish strong management systems for conflict minerals supply chain due diligence and reporting compliance.

Adopt and commit to a supply chain policy for minerals originating from conflict-affected and high-risk areas.

The Company has adopted a policy relating to the Conflict Minerals (the "Policy"), which incorporates the standards set forth in the OECD Guidance. Specifically, the Policy states that the Company supports the actions of governments and organizations to increase supply chain transparency and enable companies to source conflict-free minerals. Further, the Company has initiated a comprehensive process to meet its regulatory obligations related to the sourcing of Conflict Minerals, taking steps to expand its supply chain due diligence measures and internal controls for the Conflict Minerals.

The Policy is available on the Company's website at <http://www.allot.com/company/get-to-know-allot/quality-management/>.

Structure internal management systems to support supply chain due diligence.

The Company's compliance with the Policy and the Rule is overseen by the head of the Company's engineering department. A team of subject matter experts from relevant departments within the Company, including the engineering, quality assurance and legal departments, is collectively responsible for implementing the Company's conflict minerals strategy and compliance processes and for training employees outside of the team on their roles and responsibilities in connection with the compliance program. Additionally, this team meets regularly to assess the progress of the Company's compliance program and reports to management from time to time. The team reported progress and results of its due diligence efforts to management at review sessions held at various times throughout the 2014 calendar year.

Establish a system of controls and transparency over the Conflict Minerals supply chain.

To educate its senior management regarding sourcing practices, the Company has participated in groups and forums focused on responsible sourcing of Conflict Minerals, including several presentations given by the Institute of Printed Circuits, ILTAM – The Israeli Users' Association of Advanced Technologies in Hi-Tech Integrated Systems, and Flextronics, a major supply chain solutions company, in addition to other educational seminars run by industry professionals.

Consistent with the Company's commitment to sourcing products from suppliers that share its values with regard to human rights, ethics and social and environmental responsibility, as outlined in the Policy, and in compliance with the Rule, the Company has undertaken a multi-stage diligence inquiry to verify the possible sources of the Conflict Minerals contained in the products manufactured or contracted to be manufactured by the Company. The team overseeing the Company's conflict minerals strategy and compliance program has led this inquiry, with each focus group listed below tasked with specific responsibilities relating to the due diligence efforts:

- Engineering focus group
 - o Identifying and providing information regarding all parts and components used in all products manufactured or contracted to be manufactured by the Company, and all raw materials used in the manufacturing process.
 - o Establishing and implementing a database for tracking and reporting Conflict Minerals data.

- Quality Assurance focus group
 - o Ensuring that the Company's Policy is implemented by suppliers in contracts and purchase orders.
 - o Promoting transparency and ensuring that information concerning the Company's compliance is available to customers and sales personnel.

- Legal focus group
 - o Ensuring that the Company complies with relevant laws and regulations, including the related reporting requirements. Engaging in contract and other documentation reviews.

Strengthen the Company's engagement with suppliers.

The Company informs its in-scope manufacturers and suppliers of its materials disclosure requirements, including its compliance with the OECD Guidance and the Rule, and of specification updates that the Company communicates and tracks electronically. Moreover, the Company has revised the terms of its purchase order and contract terms and conditions to ensure that manufacturers and suppliers are expressly required to procure the Conflict Minerals from sources that have been verified as conflict-free and to support the supply chain due diligence process employed by the Company.

Establish a company-level grievance mechanism.

The Company maintains an open reporting system through which employees and third parties may report concerns about potential or actual violations of the Policy. Concerns may be reported anonymously or for attribution through several channels, including through an employee's immediate manager or the Company's legal department.

OECD Guidance Step 2: Identify and assess risks in the Company's supply chain.

Identify risks in the supply chain.

The Company does not purchase Conflict Minerals directly from mines, smelters or refiners. The Company's supply chain with respect to the Covered Products is complex, with multiple intermediaries and third parties in the supply chain between the Company's manufacture of the Covered Products and the original sources of Conflict Minerals. As a result, the Company designed its due diligence to conform to the requirements of the Rule and the OECD Guidance, as applicable for downstream companies. The Company relied and continues to rely on its suppliers to provide information regarding the origin of Conflict Minerals included in the Covered Products. Because the Company believes that the smelters and refiners of the Conflict Minerals are best situated to identify the sources of Conflict Minerals, the Company relied on its linkages to suppliers to identify the applicable smelters and refiners of Conflict Minerals in the Company's supply chain.

The first step in the Company's due diligence process was to determine which products manufactured or contracted to be manufactured by the Company during the 2014 calendar year may fall within the scope of the Rule and which first-tier suppliers and manufacturers the Company ought to engage in its due diligence efforts.

- The engineering focus group reviewed the catalog of the products manufactured or contracted to be manufactured by the Company in the 2014 calendar year to determine which products contain Conflict Minerals necessary to the functionality or production of the product. The Company's Product Lifecycle Management software was used to generate a list of all of the components of these products. Based on the components used in products manufactured or contracted to be manufactured by the Company, the Covered Products were identified. The Covered Products are listed in Part I of this Report.
- The engineering focus group also generated, through the Company's Product Lifecycle Management system, a list of the manufacturers or suppliers of the components of the Covered Products, allowing the engineering focus group to pinpoint the Company's first-tier manufacturers and suppliers.
- Based on the engineering focus group's findings, the Company engaged an expert consulting agency, SBS Ltd. (the "Consultant"), in order to update the Company's Compliance Data Manager software. This Conflict Minerals management system stores information, such as documents received from manufacturers and suppliers, reflecting active components used by the Company and the degree to which the Company's manufacturers and suppliers adhere to relevant laws. In recording this data, the system ensures a fixed tracking of sources of components and raw materials.

Once the final first-tier manufacturer and supplier list was confirmed, all manufacturers and suppliers identified in connection with the Covered Products were then contacted by the Consultant and provided with a supply chain survey in the form of the latest version of the Electronic Industry Citizenship Coalition Conflict Minerals Reporting Template (the "EICC Conflict Minerals Reporting Template"). The Company modeled its survey after version 3.01 of the EICC Conflict Minerals Reporting Template for part of the 2014 calendar year, and then adopted version 3.02 of the template following its release on November 7, 2014. In its cover letter enclosing the template, the Consultant (i) reiterated the requirements of the Rule and its applicability to the Company and (ii) requested that each recipient manufacturer or supplier complete the survey for all products supplied to the Company during the 2014 calendar year.

As set forth in the EICC Conflict Minerals Reporting Template and the OECD Guidance, manufacturers and suppliers which completed the survey, made representations or provided information regarding the following:

- the country of origin for the Conflict Minerals contained in the components or products provided by the solicited manufacturer or supplier to the Company;
- whether such Conflict Minerals directly or indirectly finance armed conflict in the Covered Countries;
- all of the smelters in the manufacturer or supplier's supply chain for such Conflict Minerals;
- whether such smelters have been validated as in compliance with the Conflict-Free Smelter Initiative's ("CFSI") Conflict-Free Smelter Program ("CFSP");
- whether the manufacturer or supplier has its own Conflict Minerals policy that requires its own direct suppliers to be DRC conflict-free; and
- whether the manufacturer or supplier uses the EICC Conflict Minerals Reporting Template with its own suppliers to gather similar information.

Assess risk in the supply chain.

The information received from manufacturers and suppliers was reviewed against the CFSI's Conflict-Free Smelter list. The Company adopted the following multi-step process to evaluate the surveys:

- If correctly completed, each survey identified the smelters and refiners within the solicited supplier or manufacturer's supply chain. Thus, the Company compared each completed survey against the CFSI Conflict-Free Smelter list to determine whether the smelters or refiners associated with the surveyed supplier or manufacturer qualified as "conflict-free." The CFSP uses independent third-party auditors to audit the source, including mines of origin and chain of custody, of the Conflict Minerals processed by smelters and refiners which agree to undergo an audit. The smelter or refiner is considered "conflict-free" on the CFSI Conflict-Free Smelter list if the audited smelter or refiner adheres to the CFSP's assessment protocols and the independent auditor verifies separately that the smelter's or refiner's Conflict Minerals originated from conflict-free sources. To be compliant with CFSI standards, smelters and refiners must disclose to the auditors the identities or locations of the mines from which they source their Conflict Minerals. The CFSI Conflict-Free Smelter list includes the names, locations and links to conflict minerals policies of all smelters and refiners deemed compliant with the CFSP's assessment protocols.
- The Company worked with individual manufacturers and suppliers that had questions or concerns regarding the survey modeled after the EICC Conflict Minerals Reporting Template or regarding the Rule.
- Manufacturers and suppliers that returned surveys that appeared to be incomplete or incorrect were contacted again with a follow-up request to provide the missing information or to correct the inaccuracies.
- Manufacturers and suppliers that refused to respond to the follow-up request were issued an official notification by the Company's senior officers informing them that continued refusal could result in cancellation of all contractual engagements.

Following the process outlined above, as of December 31, 2014, the Company received completed survey responses from manufacturers and suppliers on the list, responsible for approximately 55% of manufactured parts used in the Covered Products included in the supply chain survey. The Company relied on the completed surveys it received from its manufacturers and suppliers as the main source of documentation supporting the representations made by such parties regarding the source and chain of custody of relevant Conflict Minerals.

OECD Guidance Step 3: Design and implement a strategy to respond to identified risks.

Report findings to designated senior management.

The team overseeing the Company's conflict minerals strategy and compliance program reported its due diligence findings to senior management overseeing the supply chain and engineering departments, including the Corporate Quality Assistant Vice President and the Vice President for Operations. All completed surveys from manufacturers and suppliers were stored electronically in a central location accessible to authorized employees in the Company's engineering and legal departments. The Company's quality assurance department was involved in the design and was responsible for the internal audit of the due diligence process.

Devise and adopt a risk management plan.

In light of the complexity of the Company's and its suppliers' supply chains, the Company is currently unable to assess adequately all of the risks in its supply chain. However, the Company has taken and continues to take steps to manage risks, including:

- engaging with manufacturers and suppliers to obtain current, accurate and complete information about the Company's supply chains;
- encouraging manufacturers and suppliers to implement responsible sourcing and—to the extent that the Company is a downstream company with limited control over smelters and refiners—asking manufacturers and suppliers to encourage smelters and refiners to obtain a “conflict-free” designation from an independent, third-party auditor;
- taking part in industry initiatives promoting “conflict-free” supply chains; and
- advocating that our industry membership organizations develop and implement due diligence capability training modules in cooperation with relevant international organizations, non-governmental organizations, stakeholders and other experts.

The Company employs an escalation process whereby it promptly engages directly with suppliers or manufacturers upon obtaining any information that may indicate that such suppliers or manufacturers may be sourcing Conflict Minerals from any of the Covered Countries. Various steps taken by the Company in such instances may include requiring a contracted supplier or manufacturer to find an alternative source for the Covered Minerals for use in products or components supplied to the Company, or, if appropriate in light of all relevant factors, suspending or terminating contractual relationship with the supplier or manufacturer. The Company's risk management plan is ultimately to discontinue doing business with any supplier found to be purchasing the Conflict Minerals, the trading of which directly or indirectly finance or benefit armed groups in the Covered Countries, after attempts at corrective actions are not successful.

OECD Guidance Step 4: Carry out independent third-party audit of smelter/refiner due diligence practices.

Due to the Company's position in the supply chain, the Company does not have a direct relationship with smelters and refiners, nor does it perform direct audits of the smelters and refiners that provide its supply chain with the Conflict Minerals contained in the Company's Covered Products. The Company relies upon industry efforts to influence smelters and refiners to undergo audits and become certified through the CFSP.

OECD Guidance Step 5: Report annually on supply chain due diligence.

The Company has filed with the Securities and Exchange Commission its specialized disclosure report on Form SD, which includes this Conflict Minerals Report as Exhibit 1.01, for the reporting period from January 1, 2014 to December 31, 2014. In accordance with OECD Guidance and the Rule, the Company has also made these disclosures available on its website at <http://investors.allot.com/sec.cfm>.

PART III. THE COMPANY'S DUE DILIGENCE FINDINGS AND CONCLUSIONS

After exercising the due diligence described above, the Company was unable to conclusively determine the origin of the Conflict Minerals contained in the Covered Products.

However, based on the information that was provided by the Company's suppliers and otherwise obtained through the due diligence process, the Company believes that, to the extent reasonably determinable by the Company, the facilities that were used to process the Conflict Minerals contained in the Covered Products during the covered period included the smelters and refineries listed on [Appendix A](#) to this Report.

PART IV. IMPLEMENTATION OF STRATEGIES TO RESPOND TO IDENTIFIED RISKS AND FUTURE STEPS

Going forward, the Company plans to continue to engage with its manufacturers and suppliers to obtain current, accurate and complete information about its supply chains and will continue to improve its due diligence efforts to ensure responsible sourcing in compliance with the Policy. The Company also intends to continue its engagement with industry programs and groups to encourage the further adoption, improvement and reliability of relevant programs, tools and standards. The Company intends to monitor the performance and efficiency of its due diligence efforts and to establish procedures designed to account for any new risks in the risk management plan.
